

Wednesday's breakout session to discuss post-closure phase of a repository

Questions:

1. For each repository concept, what are the key features on which safety during the post-closure period relies?
2. What are the key factors that could compromise safety?
3. What research, development and demonstration activities are needed to enable a repository to be developed?
4. Consequently, on what timescales could the development of a repository based on each concept proceed?
